

OUR VISION FOR SUSTAINABILITY: 5 PILLARS

1. CLIMATE AND ENERGY

We are actively committed to reducing our CO₂ emissions through energy efficiency, making our facilities more sustainable and using renewable energy sources. With clear reduction targets, we are working step by step towards a climate-neutral future.

2. CIRCULAR USE OF RAW MATERIALS

By reducing waste, reusing water and using materials and energy more efficiently, we aim to maximise the value of raw materials and minimise our impact on the environment. Zero Pellet Loss is a key component of our sustainability and environmental strategy. Every plastic pellet that ends up in the environment is one too many and can cause long-term damage to ecosystems and watercourses. That is why we aim for zero pellet loss through prevention, the immediate clean-up of spills and raising awareness amongst all staff in line with the principles of Operation Clean Sweep (OCS).

3. SUSTAINABLE SERVICE PROVISION AND INNOVATION

We continuously invest in innovative technologies, more efficient processes and environmentally friendly solutions. In this way, we create sustainable added value for our customers and strengthen our position within the logistics chain.

4. PEOPLE AND SAFETY

Our employees are the foundation of our success. That is why we invest in a safe working environment, training, engagement and a strong culture of sustainability in which everyone takes responsibility for people and the environment.

5. TRANSPARENCY AND CORPORATE RESPONSIBILITY

We measure, monitor and report on our sustainability performance. Through open communication, clear objectives and a long-term vision, we build trust with customers, employees, partners and society.

Together, these five pillars form the foundation of our sustainability strategy and guide the choices we make today for the generations of tomorrow.
